                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                              This sequence represents a human ceramide kinase designated hCERKI. The invention relates to hCERKI, nucleic acids encoding it, expression vectors and host cells containing hCERKI nucleic acids, the recombinant production of hCERKI and antibodies specific for hCERKI. The invention also encompasses methods of isolating hCERKI from samples, the use of hCERKI indig screening, and the use of hCERKI nucleic acid sequences in gene therapy. hCERKI mediates the ATP-dependent 1-phosphorylation of carmides and can be used to screen for therapeutic and preventive agents for a wide range of disorders. Such disorders include neurological disease, inflammation, human immunodeficiency virus (HIV) infection, type 2 diabetes, obesity, sepsis, arteriosclerosis and cancer

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to human sphingosine kinase 4 (SPHK4; ABR56301). The kinase can be used for the diagnosis and treatment of sphingosine related disorders. The kinase can also be potentially used for controlling toxicity of platelet transfusion and as a platelet stabiliser. The present sequence was used to illustrate the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          IKDSEKKRWLGLARYDFSGLKTFLSHHCYEGTVSFLPAQHTVGSPRDRKPCRAGCFVCRQ

                                                                                                                                                                                                                                                                                                                                                           ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence is that of human sphingosine kinase C (SKC), an enzyme that phosphorylates sphingosine to form sphingosine 1-phosphate. The sequence was deduced from that of a polymucleotide (see AAASOIO) isolated from an Hela cDNA library. The invention provides polymucleotides (see AAASOSO8-10) and polypeptides (see AAYSOSO-10) for the human sphingosine kinase (SK) homologues SKA, SKB and SKC. The polymeptides can be obtained using recombinant DNA methods, and host cells containing expression vectors including SK polymucleotides are used in a claimed method of screening for compounds that inhibit or activate human SK activity. Human SK specific antibodies, inhibit or activate their analogues can be used as bioactive agents to treat inflammation or disease including viral, bacterial or fungal infections, allergic responses, mechanical injury associated with trauma, hereditary diseases, lymphoma or carcinoma, and other conditions with activate the genes of kidney, lung, heart, lymphoid or tissues of the nervous system
                                                                      480
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New human sphingosine kinase A, B and C polynucleotides and polypeptides useful in e.g. chromosome and gene mapping, and detecting inflammation or disease associated with abnormal levels of sphingosine kinase expression.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human, sphingosine kinase; SphK; restenosis; ischaemia; gene therapy; antisense therapy; cancer; sphingolipid; signalling molecule; apoptosis; cytostatic; tumour necrosis factor-alpha; TNF; atherosclerosis; lymphoma; leukaemia; vasctropic; cell proliferative disorder; vascular disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      An isolated Sphingosine Kinase polypeptide useful for treating a SphK-
associated disorder especially cancer, restenosis or ischemia in a human.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to sphingosine kinase (SphK) polypeptides and nucleic acids encoding them. SphK is useful for treating a SphK-associated disorder especially cancers such as leukaemia, lymphoma,
                                                                                                                                                                             241 TFLSHHCYEGTVSFLPAOHTVGSPRDRKPCRAGCFVCROSKQSLEEEQKKALYGLEAAED

               atherosclerosis, restenosis or ischaemia and cell proliferative disease or disorder associated with vascular diseases. SphK gene is used in gene therapy and antisense-therapy. Sphingolipids serving as signalling molecules, have recently emerged as regulators of cell growth, diverse cell phenotypes and cell death. Activation of SphK by tumour necrosis factor (TNR) -alpha inhibits apoptosis in human endothelial cells. The present sequence is human sphingosine kinase
                                                                                                                                                                                                                                                                                                                                    9

The present invention describes an isolated PRO nucleic acid (1). Also described: (1) a vector comprising (1); (2) a host cell comprising the vector of (1); (3) a process for producing a PRO polypeptides; (4) an isolated PRO polypeptide; (5) a chimeric molecule comprising the cisolated PRO polypeptide; (5) a chimeric molecule comprising the polypeptide of (4) fused to a heterologous amino acid sequence; (6) an tibody which specifically binds to a polypeptide of (4); an agonist or composition of matter comprising a polypeptide of (4), an agonist or antagonist of the polypeptide or an antibody that binds to the comparising a container, a label on the container and a composition of marmal; (10) a method of treating an immune related disease in a marmal; (10) a method for determining the presence of a PRO polypeptide or an asample suspected of having the polypeptide; (11) a method of container and a composition of container and a composition of a marmal; (12) a method of identifying a compound that inhibits or comparisons an immune related disease or an inflammatory immune response in a mammal; (12) a method of stimulating the immune response in a mammal. The container have antializeristic, antialmatory, antipsociatic, antialmatory, antispociatic, antialmatory, antispociatic, antialmatory, antispociatic, antialmatory, antispociatic, antialmatory, antispociatic, antialmatory, and the encoded polypeptides, compositions, kits and methods are conspectation personal and treating an immune response and methods are cuseful in diagnosing and treating an immune response and methods are cuseful in diagnosing and immune response. The present sequence represents a human construction from the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      PRO polynucleotides and polypeptides, useful in useful in diagnosing treating an immune related disease, e.g. systemic lumis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   EMLEKLISRPKHLLVFINPFGGKGQGKRIYERKVAPLFTLASITIDIIVTEHANQAKETL

The invention relates to a novel isolated polynucleotide and the encoded polypeptide. The molecules of the invention demonstrate antinfilammatory, neuropercetive, antianaemic, cytostatic and vulnerary activities and may be useful in preparing a composition for diagnosing or treating inflammatory, haematopoietic, immune, neurodegenerative or stem cell disorders, such as aplastic anaemia or cancer, as well as for promoting wound healing. The molecules may also be utilised during gene therapy procedures. The current sequence is that of a human therapeutic protein of the invention. The current sequence is not shown explicitly within the specification but can be accessed from the WIPO web-site.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ઠે
                                                                 The invention relates to isolated polynuclectide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynuclectides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for generation expression or blodycal activity. The polypeptide and polynuclectide sequences for other traits to assess biodiversity and to acid sequences. Asgono10-48030377 represent novel human diagnostic amino acid sequences of the invention. Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from MIPO at (II) with very manual directly from WIPO at (II) at the printed specification, but was obtained in the printed specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                 6
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       CSRENFLRFLIRHTNQQDQFDFTFVEVYRVKKFQFTSKHMEDEDSDLKEGGKKRFGHICS 510

The kinase can be used for the diagnosis and treatment of sphingosine related disorders. The kinase can also be potentially used for controlling toxicity of platelet transfusion and as a platelet
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    266
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        DCVCYSTVGTSDAETSALHIVVGDSLAMDVSSVHHNSTLLRYSVSLLGYGFYGDIIKDSE 180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cativity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences of the invention. Note: The sequence data for this electronic format directly from NPO at the vipo.int/pub/published_pct_sequences

New reagent for modulating the activity of sphingosine kinase-like protein polypeptide or polynuclectide and treating cancer, asthma, allergy, an autoimmune disease, or a central or peripheral nervous system
                                                                                                                                                                                                                 The invention relates to a human sphingosine kinase-like protein. The polypeptide can be expressed by standard recombinant methodology. The sphingosine kinase-like protein and gene can be used to regulate intracellular signalling and consequently cell proliferation and apoptosis. Such regulation is useful for treating cancer, allergies (e.g. asthma), autoimmune diseases (e.g. rheumatoid arthritis) and central and peripheral nervous system discorders (e.g. parkinson's disease). The present sequence represents the human sphingosine kinase-like protein
                                                                                                                                                                     Claim 25; Fig 2; 120pp; English.

"Identification of novel transcribed sequences on human chromosome 22
DNA Res. 8:1-9(2001).

"Identification of novel transcribed sequences on human chromosome 22
Cofficiently on natural and analog ceramides (76, 68, C16 ceramides, and C8-dihydroceramide),
Cofficiently on natural and analog ceramides (76, 68, C16 ceramides and C8-dihydroceramide),
Cofficiently on natural and con the Ilpids, such as various sphingosines.

Cofficiently on natural and con the a various sphingosines.
Cofficiently on natural and content and magnesium.

Cofficiently ACTIVITY: ATP + ceramide = ADP + ceramide 1-phosphate.
Cofficiently ACTIVITY: ATP + ceramide = ADP + ceramide 1-phosphate.
Cofficiently ACTIVITY: High level expression in heart, brain, skeletal muscle, kidney and liver; moderate in peripheral blood placenta and thymus; very low in spleen, small intestine, placenta and thymus; very low in spleen, small intestine, placenta and lung.

"SMELLANEOUS: Optimal pH is 6.0-7.5.
"SMILLANEOUS: Optimal pH is 6.0-7.5.
"SMILLANEOUS: Optimal and identifican exon may exist between amino acid positions 168 and 169.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Genew, HGNC:19256; CERK.

TISSUE SPECIFICITY: High level expression in heart, brain and
testis; low expression in spleen, liver and lung; not detected in
skeletal muscle.
DEVELOPMENTAL STAGE: Highly expressed at 7 dpc and decreases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          to form ceramide 1-phosphate. Acts efficiently on natural and analog ceramides (C6, C8, C16 ceramides, and C8-dihydroceramide), to a lesser extent on C2-ceramide and C6-dihydroceramide, but not on other lipids, such as various sphingosines (By similarity). CATALYTIC ACTIVITY: ATP + ceramide = ADP + ceramide 1-phosphate. COFACTOR: Calcium and magnesium (By similarity). SUBCELLUIAR LOCATION: Cytoplesmic and membrane-associated (By
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ceramide
